

Colocation Service

Product Brief

Colocation service offers high value by delivering reliable, modern and secure facilities in Latvia, Lithuania, Estonia, Central and Western Europe. This service allows you to allocate your mission-critical hardware, software and equipment in a secure environment.

The service enables full scope of the Infrastructure-as-a-Service (IaaS) offer, that allows You to take control of your IT resources and manage your network needs as Your business grows:

- Computing power located at secure and high availability data center environment (multiple locations possible)
- Infrastructure maintenance
- Connectivity to the internet or data (IP VPN, Ethernet) services
- Professional smart hands services, provided by skilled experts

Colocation services are focused at organizations that require IT environment outsourcing services (website or applications hosting for their business support). As well this service will be suitable for the companies that use the internet as their sales and distribution channel.

Server Hosting services offer server platforms that require stable solutions in order to develop their internal, mission-critical IT systems such as CRM or ERP solutions

Contact us for more detailed information and personal advice.
